

Below are the measures currently planned for the vaccinated guests sailing from Port Canaveral, Florida

What kind of pre-cruise COVID-19 tests are acceptable?

Guests must be tested with a COVID-19 viral test that is either an antigen test or a nucleic acid amplification test (NAAT).

Antigen tests include (acceptable for fully vaccinated guests only):

- Rapid antigen test
- Viral antigen test
- Antigen Chromatographic Digital Immunoassay
- Antigen Chemiluminescence Immunoassay, or
- Antigen Lateral Flow Fluorescence

NAAT include (acceptable for vaccinated and unvaccinated guests):

- PCR – Polymerase chain reaction
- RT-PCR – reverse transcription real-time PCR
- Quantitative PCR (qPCR)
- Reverse transcription loop-mediated isothermal amplification (RT-LAMP) test
- Transcription-mediated amplification (TMA) test
- Molecular test or molecular diagnostic test
- Isothermal amplification
- Droplet Digital PCR or digital droplet PCR (ddPCR)
- Clustered regularly interspaced short palindromic repeats (CRISPR)

A rapid antigen or rapid PCR test is acceptable (of the test types listed above).

Is a self-test acceptable?

Fully vaccinated guests may use a medically observed self-test (sometimes referred to as home test) that meets the following criteria:

- The test must be a COVID-19 viral test (NAAT or antigen test) with Emergency Use Authorization (EUA) from the U.S. Food and Drug Administration (FDA).
- The testing procedure must include a telehealth service affiliated with the manufacturer of the test that provides real-time supervision remotely through an audio and video connection. Some FDA-authorized self-tests that include a telehealth service may require a prescription.
- The telehealth provider must confirm the person's identity, observe the specimen collection and testing procedures, confirm the test result, and issue a report that meets the requirements of acceptable proof of a negative COVID-19 test.
